

AM Labels Showcases Next-Generation Labelling Solutions

12 September 2025

Supplier Insight

Smart Labelling Solutions for Schools, Trusts and Education Suppliers

Labelling might not be the first thing that comes to mind when discussing innovation in education. Yet as schools, MATs and education suppliers face growing pressure to improve efficiency, ensure compliance and manage resources effectively, the importance of smart labelling is increasing.

□

Labelling, Barcoding and Automation Support

AM Labels provides labelling and barcoding solutions that can help organisations improve asset control, compliance, stock management and everyday operational efficiency.

At **PPMA 2025, held from 23-25 September at the NEC in Birmingham**, **AM Labels Limited** will showcase a wide range of labelling technologies. From high-speed colour printers to automation equipment, AM Labels' stand will highlight innovations that can have real-world applications across sectors — including education.

“

Labelling technology is no longer confined to manufacturing. Its role in education environments is becoming increasingly practical.

Operational efficiency insight

Why Labelling Matters in Education

Schools and trusts handle thousands of items every day — from science equipment, ICT devices and musical instruments to catering supplies, safeguarding documents and visitor materials.

Proper labelling is not just about organisation. It supports asset management, compliance, safety and time-saving across busy education environments.

Where Smart Labelling Can Support Schools

Asset Management

Labels and barcodes can help schools keep track of laptops, tablets, science equipment, musical instruments and other valuable resources.

Compliance

Clear labelling helps schools manage chemicals, cleaning products, equipment records and safety information more consistently.

Food Safety

Catering teams can use labelling systems to manage ingredients, allergens, expiry dates, food rotation and special dietary requirements.

Operational Efficiency

Better labelling can save staff time in stock management, administration, resource distribution and record keeping.

Technology Spotlight

Professional labels produced in-house

AM Labels supplies colour label printers, thermal label printers, scanners, consumables, applicators, RFID and software.

For schools and education suppliers, this creates the potential to produce professional labels on demand rather than relying on slower external processes.

Innovations on Display at PPMA 2025

AM Labels will showcase technology that demonstrates how far labelling has moved beyond basic stickers. These systems are relevant not only to manufacturing and packaging, but also to schools, universities, trusts and suppliers that need better control over products, resources and information.

NeuraLabel Callisto Colour Label Printer

High-speed colour label production can help organisations create professional-quality labels in-house for resources, stock, science labs or consumables.

Afinia X350 Digital Roll-to-Roll Label Press

Designed for higher-volume environments, this type of system shows how scalable labelling can support central stores, suppliers and larger organisations.

Epson ColorWorks Range

Compact colour label printers can support on-demand requirements such as event badges, visitor passes, safety notices and resource labels.

OKI Pro1050 Five-Colour Printer

White ink printing can help create clearer labels on dark or transparent materials, supporting better identification of equipment and specialist items.

Automation for Efficiency

In addition to printers, AM Labels will also showcase automation equipment, including applicators and print-and-apply systems.

For education suppliers, catering providers, print rooms or centralised MAT operations, automated labelling can make repetitive processes faster, more reliable and less labour-intensive.

Label Printing

Produce clear, professional labels for resources, products and documents.

Barcoding

Improve tracking of ICT equipment, stock and valuable school assets.

Automation

Speed up repetitive labelling tasks and reduce manual processing.

Software

Support bespoke workflows, label design and operational control.

The Bigger Picture for Education Providers

AM Labels is a UK label manufacturer and label printer specialist, with expertise covering blank, pre-printed and printed labels, as well as thermal desktop, industrial and colour label printers.

For schools and trusts, the key takeaway is that labelling technology can improve resource management, support compliance and free up valuable staff time.

What This Means for Schools and Trusts

Education leaders often focus on headline technologies such as MIS systems, digital learning platforms and safeguarding tools. Yet practical solutions like labelling can have a significant impact on day-to-day operational effectiveness.

Produce Labels On Site

Schools can create compliant, professional-quality labels without waiting for external suppliers.

Improve Multi-Site Control

MATs can manage assets and resources more consistently across multiple campuses or central stores.

Support Supplier Operations

Education suppliers can streamline packaging, shipping, stock control and product identification.

Reduce Manual Administration

Staff can spend less time on repetitive labelling tasks and more time supporting pupils and operations.

Final Thoughts

Practical technologies like labelling systems play a critical role in keeping schools running smoothly.

Whether it is labelling ICT devices, safeguarding materials, catering supplies or education products, the right system can make schools more efficient, more compliant and better equipped to focus on what really matters: teaching and learning.

Key benefits for schools

Better organisation

Resources, equipment and stock can be identified more clearly.

Stronger compliance

Labels support safety, food, chemical and document-handling requirements.

Reduced staff time

Automation and in-house printing can reduce repetitive manual tasks.

Scalable systems

Solutions can support individual schools, MATs and education suppliers.

Questions schools may want to ask

- Which assets or resources are hardest to track?
- Do catering labels clearly show allergen and date information?
- Are science and cleaning products labelled consistently?
- Could visitor passes or event badges be produced on demand?

- Would barcode labels improve ICT asset management?
- Could automated labelling reduce repetitive staff tasks?

“

The right labelling system can make everyday school operations more organised, compliant and efficient.
