

# Partnering with UAC strengthens energy management in education

30 June 2025

In today's climate of rising operational costs and growing sustainability demands, energy management has become a key priority for UK educational institutions. From primary schools and academies to colleges and universities, leaders are seeking smarter, more reliable ways to manage energy spend without compromising on quality or compliance. UAC Team offers a trusted, strategic solution — one that brings control, savings, and peace of mind to the education sector.

## Securing Energy at the Right Time

Energy prices are unpredictable, and for institutions that rely on public funding, cost stability is essential. UAC Team enables schools and universities to renegotiate energy contracts up to 12 months before the existing agreement ends. This early action approach allows clients to lock in competitive rates well before potential market increases, helping protect budgets and avoid last-minute decisions based on fluctuating costs. By monitoring both market conditions and contract timelines, UAC helps institutions stay ahead — not just keep up. Schools no longer need to worry about when to act or how to respond to price shifts; the UAC Team manages it all, timing contract renewals to the school's financial advantage.

## Avoiding Expensive Contract Pitfalls

One of the biggest financial risks in energy management is falling into “out of contract” variable rates. These rates, often much higher than standard tariffs, can drain resources from schools that are already managing tight budgets. UAC Team actively prevents this by tracking contract end dates and ensuring renewals are arranged well in advance. This careful oversight means bursars, site managers, and finance teams can confidently focus on their core responsibilities — knowing their energy costs are being professionally managed behind the scenes.

## **A Tailored Approach for Education**

Unlike generic energy brokers, UAC Team understands the specific needs of the education sector. Whether working with a single school, a multi-academy trust, or a large university, they tailor their service to each client’s structure and scale. This includes consolidated billing, consumption analysis, and supplier negotiations that reflect the institution’s unique requirements. Communication is another strength. UAC maintains regular contact with clients, offering timely updates on market movements and renewal opportunities. Their “leave it with us” approach ensures schools are supported from beginning to end, with minimal disruption and maximum efficiency.

## **Enabling Sustainability Goals**

Environmental stewardship is increasingly important across the education sector. Many institutions are working toward net-zero goals and need energy partners that align with their sustainability agenda. UAC Team can source green energy tariffs and help schools make progress toward eco-friendly targets — without sacrificing value.

By offering access to renewable energy options and supporting carbon reduction initiatives, UAC enables educational institutions to demonstrate environmental responsibility to students, parents, stakeholders, and regulators alike.

## **Trusted Support in a Complex Market**

Energy procurement doesn’t need to be complex or time-consuming. UAC Team simplifies the process, reduces financial risk, and delivers real value. Their proactive management, sector-specific expertise, and ongoing support make them a valuable partner for any UK educational organisation. For schools, colleges, and universities looking to optimise their energy strategy and future-proof their

budgets, UAC Team provides more than just a service — they offer energy confidence.
